

*Focused on
Influenza*

February 28, 2008

Honorable Tammy Baldwin
2446 Rayburn House Office Building
Washington, D.C. 20515

Dear Congresswoman Baldwin,

I would like to thank you for considering FluGen's funding application for our microneedle vaccine delivery project in conjunction with the US Department of Defense. We strongly believe that this work is good for the second district, good for Wisconsin and good for the country. I was encouraged to see that your priorities for supporting the funding of programs are consistent with FluGen's goals for this project. We believe this work will not only generate a number of high-tech jobs at FluGen and in the second district but also elsewhere in Wisconsin through our work with companies like Phillips Plastics in Menomonie and Phillips. The primary goal of the project is to impact the health and well-being of our troops both at home and abroad but the effects of our work will not stop there. This development also has the potential to be translated into technology which will improve health care for Wisconsinites, particularly the aged.

Dr. Kawaoka and I and the rest of the FluGen team enjoyed the opportunity to show you the great work that is going on with vaccine development in your district. If at any time you would like to tour the facilities again or meet to discuss ways to continue the growth of this promising sector of the Wisconsin economy, we would be delighted to host you and anyone from your team.

Sincere Regards,
